## DETAILED ACTION

### *Election/Restrictions*

Claims 20-22 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim.

Election was made **without** traverse in Paper No. 8.

### *Priority*

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claim 1 is rejected under 35 U.S.C. 102(e) as being anticipated by Kim (U.S. Patent No. 6,503,000). Kim teaches a camera apparatus comprising a tilt unit 24 in which a camera 20 is installed at the front of a first rotation axis 68, said tilt unit tilting about said first rotation axis; a pan unit 80 in which said tilt unit is rotatably held and tilt unit driving means 60 for rotating said tilt unit is provided at the back of said first rotation axis, said pan unit panning about a second rotation axis 88 perpendicular to said first rotation axis; and a casing 40 for rotatably holding said pan unit, said casing being provided with pan driving means 82 for rotating said pan unit.

*Claim Rejections - 35 USC § 103*

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 17 is rejected under 35 U.S.C. 103(a) as being unpatentable over Elberbaum (U.S. Patent No. 5,028,997) in view of Kahn (U.S. Patent No. 5,802,412). Elberbaum teaches camera apparatus comprising: a tilt unit in which a camera 46 is installed at its front and a tilt wheel 54 is installed at its back, said tilt unit being rotatably held for vertically rotating about a tilt shaft 94; a pan unit having a pan wheel 90 at its bottom end, said pan unit being rotatably held by a pan shaft 86 disposed at its top and bottom ends for horizontal rotation, and said pan unit holding 84 said tilt shaft; a casing 72/98 for rotatably holding 80 said pan unit for rotating about said pan shaft; tilt driving means 56 disposed inside said pan unit, said tilt driving means having a tilt gear 62 for rotating said tilt unit by engaging said tilt wheel; and pan driving means 40 disposed inside said casing, said pan driving means having a pan gear 42 for rotating said pan unit by engaging said pan wheel 90; wherein said tilt wheel and said tilt gear engage at a position higher than said tilt shaft (when mounted on a wall; see abstract for example) and said pan wheel and said pan gear engage at a position lower than said tilt shaft (when mounted on a wall; see abstract for example). Elberbaum does not teach that the pan/tilt gears and wheels are worm wheels and worm gears. Kahn teaches that it was known to use worm wheels 30/39 and worm gears 31/40 as the transmission for panning 39/40 and tilting 30/31 of a camera (abstract line 3).
